

Polypropylene Adaptors

Seamless Integration and Sterile Confidence: Contour BioSolutions' Polypropylene Adaptors

The polypropylene adaptors from Contour BioSolutions integrate seamlessly with our range of elbows, tees, caps and other essential parts designed and engineered to facilitate efficient yet flexible construction of single-use technology systems.

All system components fabricated by Contour BioSolutions rely solely on robust, USP Class IV compliant materials subjected to gamma irradiation to ensure thorough sterilization. This meticulous approach dramatically reduces contamination risks and instills unwavering confidence among our customer base that relies on our adaptors for critical bioprocessing operations.

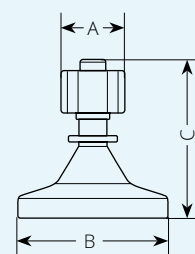

Our adaptors represent the intersection of function and efficiency, engineered to withstand the rigors and dynamics of contemporary facilities for single-use or limited-run production. Each adaptor is equipped with Tri-Clamp® and Hose Barb connections for leak-proof, resilient interfacing with the other components. All products are lot traceable, labeled, BPE free and certified animal-derived ingredient free.
