

Reducing Crosses

Contour BioSolutions' Polypropylene Reducers Ensure Seamless Flow and Sterile Efficiency

Polypropylene reducers from Contour BioSolutions are engineered to complement our elbows, tees, caps and other components explicitly crafted for single-use technology systems (SUTs). Our reducers create a seamless transition between different tubing sizes in a bioprocessing SUT system for more efficient flow and system integration.

Bioprocessing, pharmaceutical and other sterile manufacturing operations must adhere to stringent industry standards to preserve product integrity. To this end, we use robust, USP Class VI material that undergo gamma irradiation to ensure the sterility required for process optimization. Such precautions help curtail contamination risks while fostering confidence in operators who depend on our components for their essential operations.

Reducing Crosses Specifications

Part Number	Size	Connection		Dimensions	
		A	B	C	D
XYZ	1/8" x 1/4"	1/8"	1/4"	1.94	1.36
-	3/8" x 1/8"	3/8"	1/8"	1.94	1.36
-	1/2" x 3/8"	1/2"	3/4"	2.368	2.25
